Summary: In the following text are described the guidelines for presenting complete works. (*The format in which this text is presented, serves as an orientation of the work structure*). Failure to comply these guidelines may involve the exclusion of the work from the magazine.

[Blank line 10 points]

Keywords: keywords that characterize the article content separated by commas.

[Blank line 10 points]

[Blank line 10 points]

1. EXTENSION.

Full papers of up to 4 pages (excepting invited articles that could be longer) including all sections following the format rules given herein are welcome. For a correct processing, the resulting file size must be less than 5 MB.

2. GENERAL FORMAT.

The margins will be 2 cm in all cases (upper, lower, right and left). The text must be adjusted to 2 columns (except the Title, Authors and Summary), with 1 cm. spacing between columns. Simple spacing will be used between lines of text leaving a blank line between paragraphs (without bleed), as well as between the main text and the next section heading. The first line after the heading will have a paragraph space of 6 points.

Main text formatted in Times New Roman font size 10.

3. TITLE.

At the top of the first sheet, centered without leaving space. Times New Roman font size 12, caps and **bold**.

4. AUTHORS.

The name of the authors will be centered below the title, leaving a blank line of 10 points. Type of letter: Times New Roman font size 11 **bold, italics and lowercase**. The name of the author presenting the work should be underlined, and membership to different groups will be indicated by a superscript after the name.

After a blank line, the authors affiliation will be indicated. The rapporteur's e-mail address must be included. In the case of postgraduate and master students it is recommended to provide the email of one of their supervisors, due to their intrinsic temporality. Each center's address, if so, will be included in a different line, Times New Roman font size 11.

5. SUMMARY.

It will not exceed 150 words in the English version. It will be placed below the authors after 4 blank lines (10 points size). After the summary, the keywords will be given, with a space of 10 points in between. The main text in double column will begin after the keywords separated by two blank lines.

6. HEADINGS.

Different sections headings will be typed in **CAPITAL LETTERS, BOLD** and will be numbered correlatively. Subheadings, if applicable, should be lowercase and underlined.

The text will be separated from the next heading by a blank line, but after the heading, the first line of text will not have blank line, although it must have a paragraph spacing of 6 points. The subsections will be numbered in the order of appearance with the section number followed by the subsection, each followed by a point, with a previous paragraph spacing of 6 points. Previous and subsequent spacing should not be applied at the same time to maintain a distance of 6 points.

Example:

2. EXPERIMENTAL PROCEDURE.

2.1. Raw materials.

Texto correspondiente. Párrafo con espaciado posterior 6 ptos.

7. EQUATIONS AND FORMULAS.

It is recommended to type the formulas leaving a blank line before and after them and entering their reference number in parentheses in the right margin. Equations should be cited before appearing in the text.

8.FIGURES AND TABLES.

The figures will appear inserted in the corresponding place of the text.

As a general rule, tables and figures should occupy the column width, although if necessary they can be prepared to cover all the sheet width. The figures, to

which reference will be made in the text, will appear numbered correlatively and with a figure foot that will have the structure shown in the following example:

Figure 1. Longitudinal section of the fold 2 A. Fold in the inner elbow side. 2,4x.

The tables will have the same format as the text, placing the corresponding number and title before each table as shown:

Table 1. Chemical composition of steels.

The legend of the tables are put above the table, while the explanation of the figures appear as foot below them.

9.REFERENCES.

They will be cited in the text with the corresponding number in brackets: [1]. They will be presented grouped in the last section. The references will be numbered correlatively in the order they appear in the text, with the following form:

[1] Kamdar, M. H., “Embrittlement by Liquid and Solid Metals”, Ed. The Metallurgical Society, 1984.
